

“Those who previously had microdermabrasion feel that MediDerm is more effective in terms of skin smoothing.”
– Dr. Neil Sadick

“I found encouraging results for stretch marks.”
– Dr. Aurora DeJuliis

“...one of my patients called to tell me MediDerm was the ‘best thing she’d ever done for herself,’ she said the results were absolutely amazing and she swears it took ten years off.”
– Connie Nutter, RN

*Introducing
the World's first,
pain-free,
controlled
dry face peel.*

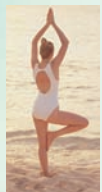

What is the MediDerm® Laser?

MediDerm® Laser is a new patented **skin rejuvenation** process that can reduce wrinkling and skin imperfections while giving you a smoother, younger look.

Unlike any other laser treatment available, MediDerm® utilizes an Erbium YAG patented laser system that delivers a customized beam of focused light energy to your face. This laser beam is designed for your face and will yield a controlled, precise **Dry Face Peel** with **no blistering, no wounds**, and virtually **no pain** and **no downtime**.

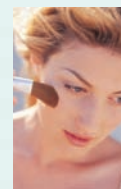

The MediDerm® results in the tightening of the skin and allows a new layer of skin to **regenerate**. The MediDerm® can reduce fine lines and wrinkles. The results give the newly exposed skin a **more uniform texture** and **younger look**.

How soon will I see a difference?

What kind of results can I expect?

You can expect to see initial **results immediately**. The entire procedure takes less than one hour.

You'll experience a **controlled**, uniform **Dry Face Peel** 2 - 7 days after the MediDerm® treatment. During this time period, the appearance of exfoliating skin can

be minimized or eliminated by use of a moisturizer or make-up. Your healthcare professional might recommend a cleansing face scrub or other exfoliation treatment during this time period.

Depending upon the setting of the MediDerm® Laser and your specific skin type the following may occur:

- Mild stinging sensation for several hours. *This can be relieved with a cold compress. Moisturizers and creams should NOT be used for the first several hours unless approved by your healthcare provider.*
- Some degree of redness. *Some areas may appear more red than others, which will diminish during the regeneration period as your face peels, and can be easily covered with make-up.*

How does MediDerm® - compare to other options?

MediDerm® Laser provides more visible results than a basic Microdermabrasion or Intense Pulsed Light. MediDerm® is a **true "subablative" laser** designed especially for your face, which yields a controlled, uniform Dry Face Peel without blistering or wounds, and virtually no pain or downtime. It's also less invasive than strong chemical peels or surgical intervention.

How long does the MediDerm® laser effect last and how often can I have a treatment?

The effect of each treatment can last for months. Consult your healthcare professional concerning follow-up treatments.

With MediDerm® you don't have to question if there will be any results or improvement to your skin.

You'll see the visible results.
Just look in the mirror.

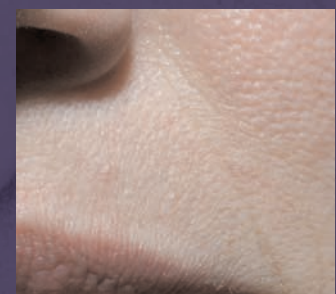

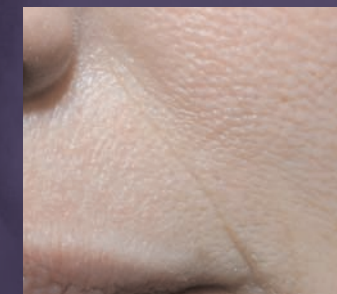

Patient photos after only one MediDerm® treatment.
